1. Introduction

The goal of this study is to cast some useful light on the constructions of *go get* and *go & get* through corpus-based approaches. These constructions share similar structures and meanings as (1) and (2) show:

- (1) a. Go get the paper.
 b. I told you to go get the paper.
 c. Every day I go get the paper. (Pullum, 1990, p. 219)
- (2) a. Go & get the paper.
 b. I told you to go & get the paper.
 c. Every day I go & get the paper. (Pullum, 1990, p. 221)

There has been a good deal of discussion in the literature on these constructions.

Traditionally, scholars have taken two different views as to these constructions, and some have tried to apply corpus-based approaches since the beginning of the twenty-first century.

Early scholars tend to focus on the similarities between the two constructions, and consider that *go get* is derived from *go & get*, through deletion of *and* (i.e. *and*-deletion). For instance, Jespersen (1940, p. 248) mentions that “it [*go* and *come* with the bare infinitive] is felt to be short for *go (come) and*”. In addition, Visser (1969, p. 1399) suggests that “[u]nlike the former type [*go see*], the type with hendiadys [*go and see*] already occurs in (late) Old English, which seems to indicate that ‘*go see*’ developed from ‘*go and see*’ by elision of the conjunction.”

On the other hand, later scholars focus on the syntactic and semantic differences, and regard *go get* and *go & get* as different constructions. Shopen (1971) points out that these two

constructions are not always interchangeable as (3) shows. Furthermore, Pullum (1990) gives many examples which show that *go get* does not allow any inflectional forms, while *go & get* does as (4) and (5) show:

- (3) a. *Our sewage might go pollute the town water supply.
b. Our sewage might go and pollute the town water supply. (Shopen, 1971, p. 259)
- (4) a. *Every day my son goes gets the paper.
b. *I went got the paper.
c. *Going getting the paper is not my job.
d. *My dog has gone gotten the paper. (Pullum, 1990, p. 222)
- (5) a. Every day my son goes & gets the paper.
b. I went & got the paper.
c. Going & getting the paper is not my job.
d. My dog has gone & gotten the paper. (Pullum, 1990, p. 222)

Though there has been much discussion on these constructions, scholars have paid little attention to empirical examples, which has caused troubles to both groups. For instance, Visser (1969) suggests that “[c]ombinations with a finite form of *go* (e.g. ‘They went look for him’) are still met with in American English” (p. 1396), while Pullum (1990) disagrees about this: “I do not find such expressions [*went look*] in my daily contact with American English” (p. 219). Thanks to the development of corpus linguistics, it becomes possible to examine whether or not such an opinion is correct in the light of real usages. As Wulff (2006) and Nicolle (2009)

research concerning *go get* and *go & get* with BYU-BNC (British National Corpus)¹ (see 2.3), I introduce BYU-COCA (Corpus of Contemporary American English)².

There is room for more work to be done at this point. In this thesis, I will introduce empirical examples from BYU-COCA into the study of *go get* and *go & get*, and clarify how similar or different these constructions are. In addition, since *come* can take *come get* generally, this paper also researches *come get* and *come & get*.

The rest of this thesis is made up of five chapters. In Chapter 2, review of previous studies is indicated in three parts: traditional grammarians' views, later scholars' views, and recent corpus-based approaches. In Chapter 3, this thesis provides three research questions:

RQ1: What verbs occur in the V2 slot of *go get* and *go & get*, and how often?

RQ2: What sentence types are *go get* and *go & get* used in?

RQ3: How are *go get* and *go & get* used in declarative sentences?

In Chapter 4, the way to collect data is indicated. 4.1 shows the way to use COCA in general, and 4.2 shows the way to collect data based on the research questions. In Chapter 5, this thesis shows results of data collection and discussion followed by the research questions. In Chapter 6, summary and prospect are indicated.

Before continuing, I will refer to the terminology of *go get* construction and *go & get* construction. Although *go get* construction is called in various ways³, I follow Pullum (1990) and use *go get* and *go & get* to indicate the constructions. In the discussion below, I

³ For example, “go and come with the bare infinitive” (Jespersen, 1940); and “[g]o + infinitive” (Visser, 1969); and “the quasi-modal construction” (Shopen, 1971).

occasionally use V1 and V2 to generalize *go get* and *go & get* constructions (i.e. V1 V2 for *go get* and V1 & V2 for *go & get*).

2. Review of previous studies

It is adequate to categorize previous studies into three groups: traditional grammarians' views, later scholars' views, and recent corpus-based approaches. Prominent scholars in each group are: Jespersen (1940) and Visser (1969), Shopen (1971) and Pullum (1990), and Wulff (2006) and Nicolle (2009) respectively. The group of corpus-based studies, which is not mentioned in the introduction, differs from the other groups since the focuses of corpus-based studies are to examine how *go get* and *go & get* have been used in real situations.

2.1 Traditional grammarians' views

This group considers that *go get* is derived from *go & get* caused by *and*-deletion. In other words, the scholars in this group focus on the similarities between these constructions.

2.1.1 Jespersen (1940)

Jespersen (1940) mentions that “*go* and *come* with the bare infinitive are found here and there, chiefly in colloquial or vulgar speech; as this seems to be found chiefly after the infinitive and the imperative, it is felt to be short for *go (come) and*” (p. 248). There is no account or evidence indicating why Jespersen (1940) states that “it [*go get*] is felt to be short for *go (come) and*”. However, one of the contributions of Jespersen's (1940) study is to clarify two points: *go get* is used “in colloquial or vulgar speech” (p. 248) (i.e. its real usage): and it is often used “after the infinitive and the imperative” (p. 248) (i.e. its syntactic structure).

2.1.2 Visser (1969)

Visser (1969) deals with *go get* in relation to *go + infinitive*, arguing that the verb occurring with *go* often looks “like a kind of modal verb aspect” (p. 1398), but that “the two constituents were both imperative forms” (p. 1398). He also mentions the relation between *go see* and *go & see*, and suggests that “[u]nlike the former type [*go see*], the type with hendiadys [*go and see*] already occurs in (late) Old English, which seems to indicate that ‘*go see*’ developed from ‘*go and see*’ by elision of the conjunction” (p. 1399). Furthermore, He refers to *come+infinitive* and *come+and+infinitive* (pp. 1391-1395). He also suggests that the infinitives of these constructions express the purpose of *come*, and that “[*c*]ome has here dwindled down to the status of an accessory or quasi-auxiliary verb” (p. 1393).

Visser’s contribution is that he examines the origin of these constructions diachronically. In addition, he mentions that “*go* often loses some of its meaning of motion in space, and dwindles down to a mere sign of aspect: in some cases...its omission would not signally affect the meaning of the utterance” (p. 1396). This view has even attracted many scholars who are against and-deletion because when *go* in *go get* loses its lexical meaning and still has been used with the bare infinitive, it becomes a functional word (i.e. grammaticalized). For instance, the view of Shopen (1971) seems to be affected by Visser (1969). Furthermore, Pullum (1990, p. 219) suggests that “[p]erhaps the most perceptive account of *go get*...is that given by a relatively recent work, Visser (1969)”.

2.2 Later scholars' views

Later scholars focus on difference between *go get* and *go & get*, and they consider these constructions have different syntactic and semantic properties. They do not conclude that *go get* derives from *go & get* through *and*-deletion.

2.2.1 Shopen (1971)

Shopen (1971) regards *go get* and *go & get* as different constructions. One of the advantages of Shopen's (1971) research is that he considers *go* or *come* in *go/come get* as "quasi-modal" (p. 255), and investigates the differences between *go/come get* and *go/come & get* from the viewpoint of syntax and semantics. Shopen (1971) also suggests that verbs such as *hurry, run, sit, stay and try* can be quasi-modal for some speakers (p. 256).

Shopen (1971) states that *go get* possesses incomplete conjugations: V1 and V2 must be both base forms in (6). The construction allows *do*-support: *go get* can be used in third person singular as in (7b–d), and in past tense as in (8a). Furthermore, Shopen (1971) states that *go get* cannot take agential subjects whereas *go and get* can as in (9) and (10).

| | c. I go eat. | g. *He go eats. | |
| | d. You go eat. | h. *He goes eats. | (Shopen, 1971, p. 254) |

- (7) a. *The prime minister goes eat every day at one.
 b. Does the prime minister go eat every day at one?
 c. The prime minister doesn't go eat every day at one.
 d. The prime minister does too go eat every day at one! (Shopen, 1971, p. 254)
- (8) a. Did they go borrow the money right away?
 b. *Yes, they went borrow it. (Shopen, 1971, p. 254)
- (9) a. *Our sewage might go pollute the town water supply.
 b. Our sewage might go and pollute the town water supply. (Shopen, 1971, p. 259)
- (10) a. *Pieces of drift wood come wash up on the shore.
 b. Pieces of drift wood come and wash up on the shore. (Shopen, 1971, p. 259)

One of the features of Shopen (1971) is that he considers *go/come* in *go/come get* as quasi-modal verbs. Shopen (1971, p. 256) compares *go* and *come* with other modals like *dare* and *need*, and clarifies its prominent points: (i) the quasi-modal verbs “cannot precede the perfect construction with *have* or the progressive construction with *be* (**They go have eaten*, **They go be eating*)”; (ii) the quasi-modal verbs “can follow true modals (*He should go eat*)”; (iii) the quasi-modal verbs can be used in *to + infinitive* “(*He tried to go eat*)”; (iv) the quasi-modal verbs “can take *do*-support.” Shopen (1971) concludes that “[t]he main verb base forms are moving into the modal category, but they are still main verbs paradigmatically” (p.263). Although Shopen (1971) does not use the word “grammaticalization”, his conclusion seems that *go* and *come* are in the process of grammaticalization at the time. His view has affected many scholars like Pullum (1990).

2.2.2 Pullum (1990)

Pullum (1990) suggests that “The *go get* construction is not to be analyzed as simply the *go & get* with its coordinating conjunction elided” (p. 226). Pullum (1990) studies *go get* and *go & get* from syntactic views. Pullum (1990) adds new views to *go get* and *go & get*: “motion away from the viewpoint location is strongly implied by the *go get* construction but not by *go & get*” (p. 226) as (11) shows. In addition, “in *go & get* the V1 verb can take various kinds of complement such as particles and prepositional phrases” (p. 226) as (12) indicates.

- (11) a. *I hope they don't go come back to the house while we're in bed.
 b. I hope they don't go & come back to the house while we're in bed.

(Pullum, 1990, p. 226)

- (12) a. Go away and read something.
 b. What do you want me to go away and read?
 c. *Go away read something.
 d. *What do you want me to go away read?

(Pullum, 1990, p. 226)

Pullum's paper includes criticism against previous studies. For instance, he states that “[m]ost traditional grammars published after 1950 seem to have missed *go get* altogether, as if it had died out” (p. 219). He also mentions that “[h]e [Shopen (1971)] has some useful syntactic and semantic observations along with the way, but his conclusion that *go* and *come* are moving into the modal category seems completely incorrect” (p. 223), because quasi-modal verb and true modal verbs (e.g. *will*) share few common usages.

2.3 Recent corpus-based approaches

Since the beginning of the twenty-first century, some scholars have introduced corpus-based approaches into this issue. The difference between the studies in the late twentieth century and the beginning of the twenty-first century lies in the use of empirical evidence. Wulff (2006) and Nicolle (2009) are based on the data adduced from BYU-BNC (the British National Corpus).

2.3.1 Wulff (2006)

Wulff (2006) focuses not only on the constructions themselves, but also on the verbs which occur with *go*. In other words, Wulff (2006) focuses on the verbs in the V2 slot of *go get* and *go & get*, and categorizes the V2s into three groups:

- (A) verbs the both *go get* and *go & get* attract
- (B) verbs *go & V* attract, but *go get* does not attract
- (C) verbs *go get* attract, but *go & V* does not attract

Wulff (2006) provides an interesting result about this. The number of (B) is 92 while that of (C) is only 25. The verbs of (A) are *get, see, sit, fetch, buy, pick, check, look, find, put, tell, play, fuck, park, phone, chase, sleep, work, fondle, and post* (p. 109). This result shows that *go & get* can take larger variety of verbs than *go get*.

In addition, Wulff (2006) categorizes these verbs into four groups based on their aspects: activity, accomplishment, achievement, and state, and researches their token frequency in *go get* and *go & get*. By analyzing the results statistically, Wulff (2006) concludes that: “while

whatever action is denoted by *go-and-V* [*go & get*] gains an event-like interpretation and is meant to embrace the whole sequence cascade of a typical event with a beginning and the end, the meaning of *go-V* [*go get*] only denotes the initiation of an action and is inherently atelic, which invites process verbs to occupy the V2 slot” (p. 121). One of her contributions is that she focuses on V2 which many scholars have ignored so far / to which many scholars have paid little attention so far.

2.3.2 Nicolle (2009)

Nicolle (2009) uses spoken examples in BYU-BNC in order to evaluate the theoretical explanation of Nicolle (2007). It states that *go* in *go get* is losing its lexical meaning and has become a kind of a modifier of the verb in the V2 slot. He studies not only English, but also Digo which “is a Bantu language spoken near the coast in Kenya and Tanzania” (Nicolle, 2007, p. 58) in order to make the feature of *go get* and *go & get* clearer.

One of the advantages of Nicolle (2009) is that it researches grammatical contexts where *go/come get* and *go/come & get* occur. He categorizes *go/come get* and *go/come & get* into three groups based on the constructions used in; (i) imperative clauses; (ii) interrogative clauses; and (iii) declarative clauses. Table 1 shows the result of his research. Nicolle (2009) mentions:

[T]he percentage of *go-V* [*go get*] tokens which occur in imperative clauses is slightly higher than the percentage of *go-and-V* [*go & get*] tokens which occur in imperative clauses. This difference is statically significant and is compatible with the hypothesis

that *go-V* [*go get*] developed from *go-and-V* [*go & get*] in the context of imperative clauses. (p. 200)

Through his research, the difference of grammatical contexts between these constructions become clearer. In addition, according to the tokens indicated in Nicolle (2009), the frequency of *go/come get* is lower than that of *go/come & get* in British English.

Table 1: The frequencies of sentence types of *go /come get* and *go/come & get* found in BYU-BNC

| Construction | Total spoken tokens | Imperative clauses | Interrogative clauses | Declarative clauses |
|-----------------------|---------------------|--------------------|-----------------------|---------------------|
| <i>go & get</i> | 2322 | 547 (23.6%) | 105 (4.5%) | 1670 (71.9%) |
| <i>go get</i> | 180 | 54 (30.0%) | 5 (2.8%) | 121 (67.2%) |
| <i>come & get</i> | 738 | 188 (25.5%) | 1 (0.1%) | 549 (74.4%) |
| <i>come get</i> | 22 | 9 (41.0%) | 1 (4.5%) | 12 (54.5%) |

(Nicolle, 2009, p. 199)⁴

⁴ I have corrected obvious errors in numerical values in the table, and change *go/come-(and)-V* into [*go/come (&) get*].

3. Research questions

Wulff (2006) states that *go & get* can take more verbs in its V2 slot than *go get* in British English. Nicolle (2009) also clarifies the difference in sentence types between *go/come get* and *go/come & get* in British English. These two scholars provide a useful starting point for this study.

Since Wulff (2006) and Nicolle (2009) focus on British English, this thesis examines the usages of *go get* and *go & get* in American English by using COCA (Corpus of Contemporary American English). This thesis presents the following three research questions:

RQ1: What verbs occur in the V2 slot of *go get* and *go & get*, and how often?

RQ2: What sentence types are *go get* and *go & get* used in?

RQ3: How are *go get* and *go & get* used in declarative sentences?

RQ1 is concerned with the types and tokens of the verbs in the V2 slot. RQ2 and RQ3 deal with the grammatical contexts in which these constructions occur. This thesis compares the results with those of Wulff (2006) and Nicolle (2009), and makes clear the features of these constructions in American English.

3.1 RQ1 : What verbs occur in the V2 slot of *go get* and *go & get*, and how often?

Traditionally, researchers have been interested in the verbs in the V1 slot or the constructions themselves. For instance, Shopen (1971) states that “many speakers accept not only *go* and *come* as quasi-modals, but *hurry*, *run*, *stay*, *sit*, and *try* as well” (p. 255). Pullum (1990) argues that “in *go & get* the V1 verb can take various kinds of complement such as

particles and prepositional phrases” (p. 226) as (12) in 2.2.2 shows. However, they rarely research what verbs occur in the V2 slot in *go get* and *go & get*.

As shown in 2.3.1, Wulff (2006) lists verbs in the V2 slot in *go get* and *go & get* constructions found in BYU-BNC. Wulff (2006) makes it clear that *go get* and *go & get* are different in types of verbs they can take in the V2 slot, and examines how they are used in contemporary British English by examining the frequencies of the V2 verbs.

Butterfield (2015) writes, “[i]t [*go* + bare infinitive] survives as a normal construction in American English, ... but in British English is used in only a few fixed expressions...In Britain the normal constructions are of the type *go and* + infinitive or *go + to*-infinitive” (p. 349). This statement accords with the result of Wulff (2006). It is not clear, however, how *go get* and *go & get* are distinguished in contemporary American English. Fortunately, since COCA includes many empirical examples, this thesis examines types and tokens of the V2 verbs through the corpus.

3.2 RQ2 : What sentence types are *go get* and *go & get* used in?

Nicolle (2009) studies the difference in the grammatical contexts of these constructions, and categorized the examples into the following three sentence types: imperative, interrogative, and declarative (see Table 1 in 2.3.2). He concludes that the rate of imperative sentences of *go get* is slightly higher than that of *go & get*.

I consider it meaningful to focus on the sentence types. If the two constructions possess different features, their usages can be different, too. This thesis examines the sentence types in

order to clarify how differently the two constructions are used in American English.

3.3 RQ3 : How are *go get* and *go & get* used in declarative sentences?

As shown in Table 1 in 2.3.2, the frequencies of *go get* construction in declarative sentences are about twice as high as those in imperative ones in the spoken section of BYU-BNC. In addition, the frequencies of *go & get* in declarative sentences are about three times higher than those in imperative ones. Although Nicole (2009) focuses on imperative sentences, *go get* is also used in declarative sentences with verbs implying command, advice, request, wish, etc., or with modal verbs. Examples are given in (13) to (16) from the spoken section of COCA (SPOK).

(13) Lexical verb + O + (to) go get

- a. And I had —they— they made me go get a CAT scan. (COCA SPOK 2014)
- b. I recommend everyone to go see that movie. (COCA SPOK 2015)
- c. So he comes to the apartment and asks his mother to go get him a sandwich and a soda. (COCA SPOK 2015)
- d. I told my father to go see it because I was interested in movies. (COCA SPOK 2015)

(14) Lexical verb + O + (to) go & get

- a. This sounds like something that the TODAY Show producers would make
us go and take. (COCA SPOK 2017)
- b. Rather than him telling them to go and get help, he told them to hide...
(COCA SPOK 2015)

(15) Modal verb + go get

- a. Tom Bowman, NPR Pentagon correspondent, you have to go get some more
information for us. (COCA SPOK 2017)
- b. You should go see it. (COCA SPOK 2017)
- c. You need to go buy a Powerball ticket. (COCA SPOK 2016)

(16) Modal verb + go & get

- a. You have to go and see the head of Ford. (COCA SPOK 2015)
- b. ...you should go and look for your life... (COCA SPOK 2014)
- c. People need to celebrate and go and see the games. (COCA SPOK 2016)

Lexical verbs like *make*, *recommend*, *ask*, and *tell* possess the meaning of command, advice, request or wish in *verb + O + (to) go get* construction. In (14a) the modal verb *have to* emphasizes that it is your obligation to “*go get* some more information for us”. *Should* and *need to* imply necessity as well.

While Nicolle (2009) focuses on imperative sentences, this thesis pays attention not only to such sentences, but also to declarative ones using COCA. Co-occurrence of lexical verbs and auxiliary verbs is a key to examine how different *go get* and *go & get* are.

4. Data collection

All the examples are retrieved from COCA. The data are searched by using Collocates function on the corpus website. The function makes it possible to find verbs in the V2 slot in *go get* and *go & get* constructions. The search result shows the number of hits and the context of each occurrence together with its source information.

4.1 How to collect data from COCA

In order to collect data, it is necessary to fill two slots on the search screen (Figure 1).

Figure 1: The basic format on the website of COCA

(i) Word/phrase slot

In this slot the element preceding the V2 verb is filled. *Go* or *go and* is put into the slot in

Figure 1-1.

Figure 1-1: The first slot filled with *go* and *go and*

(ii) Collocates slot

The part of speech of the target word (collocates) can be specified. When verb.ALL is selected in the slot on the right to the Collocates slot, the symbol `_v*` is inserted automatically.

By so doing, all forms of V2 verbs in *go get* and *go & get* are collected (see Figure 1-2).

Figure 1-2: The second slot filled with verb. ALL

In order to do more accurate data collection, it is necessary to follow two further steps.

(iii) COLLOCATES display: direction/distance

The direction and distance can be specified by using this function. Figure 1-3-1 shows the explanation of this function found on the COCA website.

Figure 1-3-1: Explanation of COLLOCATES display

COLLOCATES display: direction/distance

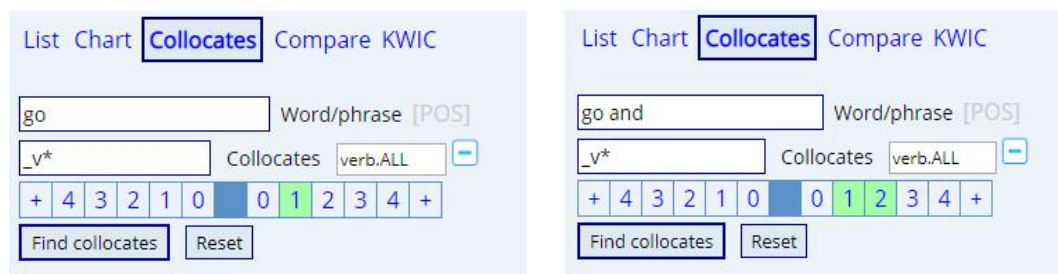

+ 4 3 2 1 0 0 1 2 3 4 +

Select the "span" (number of words to the left and the right) for the collocates. Use + to search more than four words to the left or right, and 0 to exclude the words to the left or right. If you don't select a span, it will default to 4 words left and 4 words right.

The direction of the collocates and the length of the "span" between the "node word" and the collocates is quite important. For example, consider the collocates of *gap* (n): 4 words to the left, 2 words to the right, 4 words to the right, and 4 words left / 4 words right.

Figure 1-3-2 shows that V2 of *go get* construction is one word right from the node *go*, while V2 of *go & get* construction is two words right from the node.

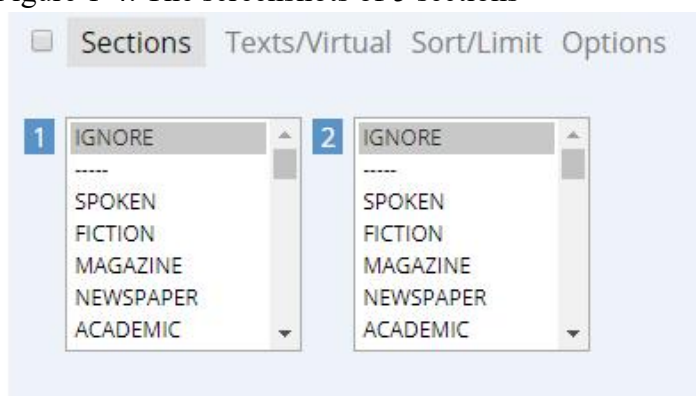

Figure 1-3-2: Specification of direction/distance from the node

(iv) Sections

It is possible to limit the data by using this function. COCA is made up of five sections: SPOKEN, FICTION, MAGAZINE, NEWSPAPER, and ACADEMIC (see Figure 1-4). It is possible to collect data from all the data (ignore), or to narrow search by selecting one or more sections.

Figure 1-4: The screenshots of 5 sections

4.2 How to sort out the data

4.2.1 Types and tokens of verbs in the V2 slot

Figure 2 shows that *verb.BASE* is selected in the second slot in order to avoid collecting any inflected forms of V2. The sections are not specified in order to find all the types of V2 verbs in *go/come get* and *go/come & get*.

Figure 2: The second slot filled with *verb.BASE*

The figure displays two screenshots of a corpus search interface, specifically the 'Collocates' tab. Both screenshots show a search for a word/phrase in the first slot and a part-of-speech (POS) tag in the second slot. The first screenshot shows the search for 'go' with the POS tag set to 'verb.BASE'. The second screenshot shows the search for 'go and' with the POS tag set to 'verb.BASE'. Both screenshots show a frequency distribution bar with the number '1' highlighted in green, indicating the number of occurrences for that specific combination. The interface includes buttons for 'Find collocates' and 'Reset'.

4.2.2 Grammatical contexts of *go get* and *go & get*

RQ2 and RQ3 focus on the top ten verbs used in *go/come get* and *go/come & get* constructions. In Figure 3, *verb.LEX(ICAL)* is selected⁵.

Figure 3 shows that the data is gathered from the SPOKEN section. The period is limited between 2013 to 2017 so as to examine more contemporary American English.

⁵ Here *verb.LEX(ICAL)* is introduced since the number of occurrences is more accurate compared with *verb.BASE*. For instance, there are 1,063 examples of *go get* (*verb.BASE*), and 17 examples of *go get* (*verb.INF(INITIVE)*) in the SPOKEN section in COCA. The number of *go get* (*verb.LEX(ICAL)*) is 1,080, which is the total of *verb.BASE* and *verb.INF(INITIVE)*. However, the data retrieved by using *verb.LEX(ICAL)* occasionally contains irrelevant examples like *go shopping* or *go looking*. Since verbs examined are limited in RQ2 and RQ3, such examples are removed manually.

Figure 3: The search screens indicating the way to collect data

The data is imported to Excel and sorted by year, sentence types, preceding modal verbs and lexical verbs, and contexts (see Appendix).

5. Results and discussion

5.1 RQ1: What verbs occur in the V2 slot of *go get* and *go & get*, and how often?

The result shows that the occurrence of *go get* is 13,731 and that of *go & get* is 1,363.

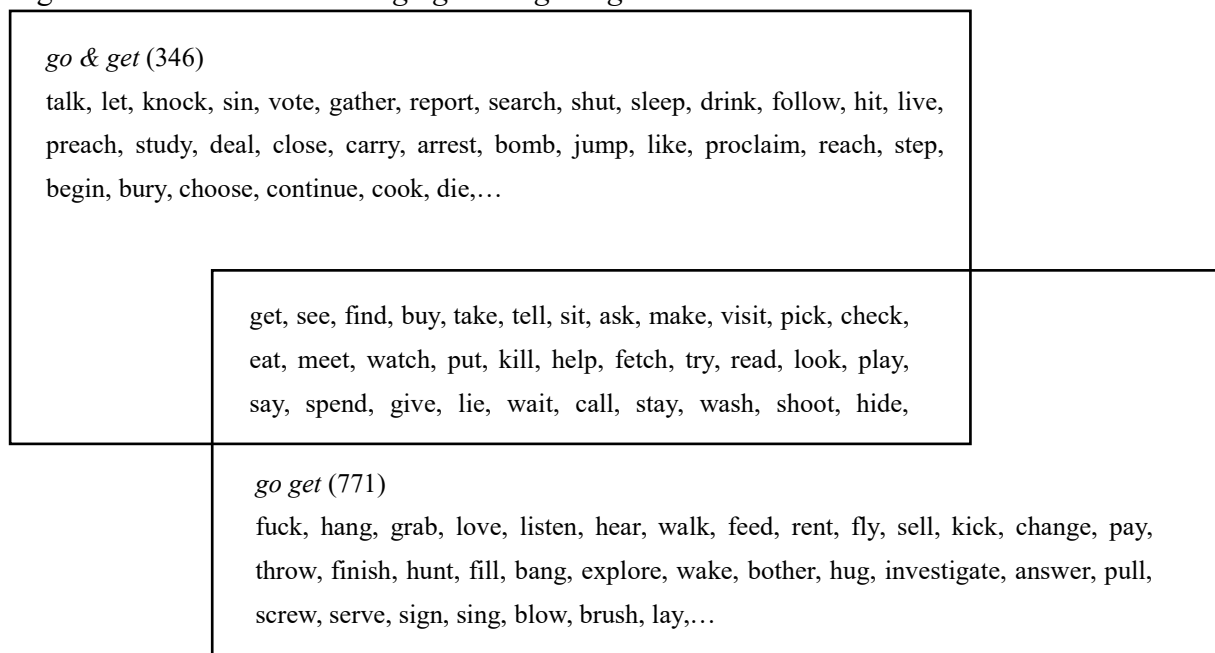

Go get takes 771 different verbs in the V2 slot, while *go & get* takes 346 different ones. I

categorize the V2 verbs into the following three groups based on Wulff (2006):

- (i) verbs which both *go get* and *go & get* attract
- (ii) verbs which *go get* can attract, but *go & get* cannot
- (iii) verbs which *go & get* can attract, but *go get* cannot

Figure 4-1 is a graphic representation of the V2 verbs of *go get* and *go & get* in COCA modelled on Wulff (2009).

Figure 4-1: The V2 verbs of *go get* and *go & get* in COCA

For comparison, the V2 verbs represented in Wulff (2006, p. 109) are reproduced below as

(Wulff, 2006, p. 109)⁶

One of the findings of this thesis is that the two constructions are used in completely different ways between American English and British English. Figure 4-2 shows that *go get* cannot take as many types of V2 verbs as *go & get* in British English. However, Figure 4-1 clarifies that the number of the V2 verbs in *go get* construction is about twice as large as that in *go & get* in American English. This finding endorses Butterfield's statement (2015) that *go get* is used as a normal construction in American English, while it is used only as a fixed expression in British English (p. 349).

Although *go get* and *go & get* takes 771 and 346 different V2 verbs respectively, the number of the V2 verbs used less than 10 times is 650 in *go get* and 321 in *go & get*. In other words, these constructions *can* take various types of V2 verbs, but the frequencies of V2 verbs are different. (17) and (18) show the top 20 V2 verbs in *go get* and *go & get*. The verbs used in

⁶ I modify the figure of (Wulff, 2006, p. 109)

both constructions are marked by boldface.

(17) *go get* : **get, see, find, buy, take, tell, sit, ask, make, visit, check,** pick, eat,
meet, **watch,** fuck, kill, **put, fetch,** help

(18) *go & get*: **get, see,** look, **sit, tell,** talk, **find, take, make, buy,** try, **watch, ask,**
play, **fetch,** say, **put, visit,** let, **check**

Get and *see* are most often used in *go get*. In fact, the total number of *go get* and *go see* is more than half of all the examples. There are 2,888 examples of *get* in the V2 slot, which shares 31.9% in all the examples of V2 verbs in *go get*. The occurrence of *see* is 2,235, which is 24.6%. Verbs other than *get* and *see* are used with some frequencies. Figure 5-1 shows the frequencies of each V2 verb in *go get* graphically.

Figure 5-1: The frequencies of the V2 verbs in *go get*

Figure 5-2 shows the frequencies of V2 verbs in *go & get*. The two most often used verbs are *get* and *see* of all the 346 verb types as in the case of *go get*. Other verbs are used with some frequencies in comparison with *go get*. *Get* in *go & get* shares 17.7% of all the examples, and *see* shares 11.7%. The percentages are not as high as those of *go get* and *go see*.

Figure 5-2: The frequencies of the V2 verbs in *go & get*

One of the findings of this thesis is that, although *go get* can take more types of V2 verbs than *go & get*, the construction is mostly used as *go get* or *go see*. On the other hand, although the number of occurrences of *get* and *see* in *go & get* is large, there are some frequencies of other V2 verbs in this construction.

In order to make the difference between *go get* and *go & get* constructions clearer, this thesis puts a focus on the aspects of V2 verbs by categorizing them into four types as in Wulff (2006): activity, accomplishment, achievement, and state. Criteria for categorization are based on Yoshikawa (1995, pp. 147-169). Since the percentages of *get* and *see* in *go get* and *go & get* are too high, Table 2-1 excludes the examples of the two verbs.

Table 2-1: Aspects and tokens of V2 verbs in COCA (*get* and *see* excluded)

| Construction | Total token | Verb types of V2 verbs | | | |
|---------------------|-------------|------------------------|----------------|-------------|------------|
| | | Activity | Accomplishment | Achievement | State |
| <i>go get</i> | 4,215 | 1,414 (33.5%) | 1,861 (44.1%) | 940 (22.3%) | 0 (0.0%) |
| <i>go & get</i> | 474 | 208 (43.8%) | 84 (17.7%) | 85 (17.9%) | 97 (20.4%) |

Table 2-1 shows that the percentages of accomplishment verbs are the largest in *go get* (44.1%). Compared with that of *go & get* (17.7%), the number shows how frequently

accomplishment verbs are used in *go get*. On the other hand, there is no example of state verbs in *go get*. The percentages of state verbs in *go & get* are the second highest. Activity verbs are high in the two constructions. The number of activity verbs in *go & get* is the highest. The rate of achievement verbs is similar in the two constructions. One of the findings of this thesis is that *go get* is preferred with accomplishment verbs but not with state verbs in American English. On the other hand, *go & get* are often used both with active verbs and state verbs.

In order to make the feature of *go get* and *go & get* clearer, this thesis deals with *come get* and *come & get* as well. The number of occurrences of *come get* construction is 4,135 with 354 different V2 verbs, while that of *come & get* is 2,495 with 264 different ones. Figure 6 shows the types of V2 verbs in *come get* and *come & get* constructions.

Figure 6: V2 verbs of *come get* and *come & get* in COCA

| | |
|--|---|
| <p><i>come & get</i> (264)</p> <p>say, live, attack, let, pay, spend, discover, shoot, throw, hug, learn, leave, present, want, hang, cook, dig, change, browse, bring, invest, move, preform, remember, steal, study, call, accept, catch, check, choose, decide, dine, drag, expect, explore,...</p> | <p>get, see, sit, take, join, look, tell, meet, talk, visit, help, play, wat, find, stay, ask, make, try, watch, give, work, pick, put, listen, buy, hear, kill, speak, share, stand,...</p> |
| | <p><i>come get</i> (354)</p> <p>check, rescue, fetch, spend, build, fly, sail, line, learn, fall, bring, form, investigate, lift, read, wake, write, feel, blow, kick, support, tend, tuck, wash, bail, beat, explore, hold, keep, lay, lose, pay, rub, seek, shoot, suck,...</p> |

Come get takes more types of V2 verbs than *come & get* does. Although *come get* and *come & get* take 354 and 264 different V2 verbs respectively, the number of the V2 verbs used

less than 10 times is 309 in *come get* and 239 in *come & get*. The top 20 verbs are shown in (19) and (20). The verbs used in the both constructions are marked with boldface.

(19) *come get* : **see, get, sit, visit, join, take, help**, pick, meet, let, **say**, stay, **find**,
tell, look, eat, watch, close, give, **talk**

(20) *come & get* : **get, see, say, sit, take, join, look, talk, tell, meet, visit, help**, play,
eat, find, stay, ask, **watch**, try, make

Figure 7-1 shows the frequencies of the V2 verbs in *come get*. The rate of examples of *come get* is 18.3% and that of *come see* is 24.7%. The figure shows that this construction takes other verbs like *sit*, *visit*, and *join* with some frequencies compared with *go get*.

Figure 7-1: The frequencies of the V2 verbs in *come get*

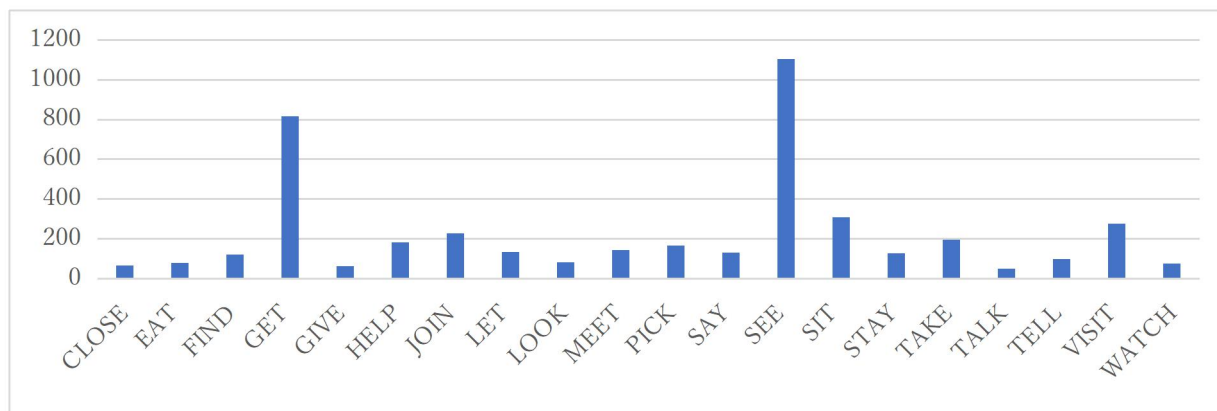

Figure 7-2 shows the frequencies of the V2 verbs in *come & get*. The percentages of all the examples in *get* in *come & get* is 20.9% and those in *see* is 16.2%. The frequencies of other verbs are a little higher than those of *come get*, but still *come & get* and *come & see* are the main usage of this construction.

Figure 7-2: The frequencies of the V2 verbs in *come & get*

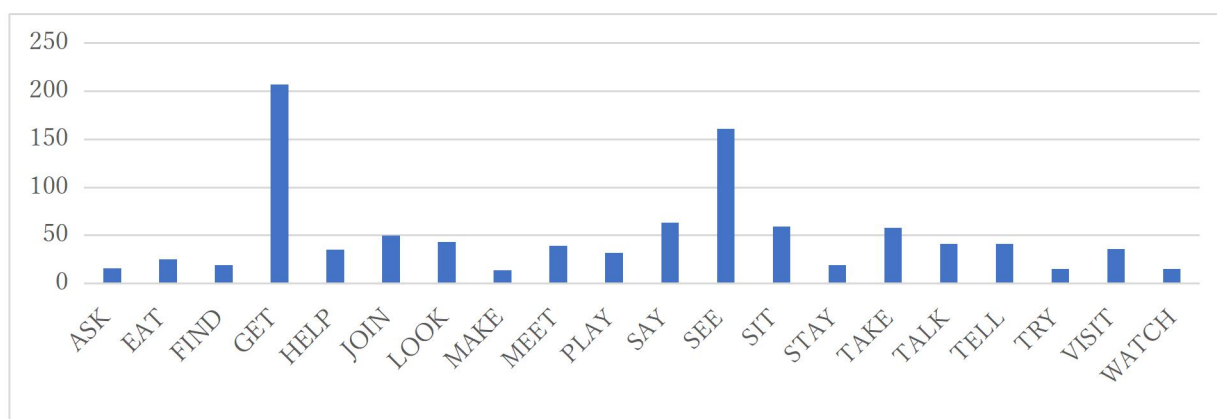

Table 2-2 shows aspects and tokens of V2 verbs in COCA except *get* and *see* in *come get* and *come & get*. It is clear that the percentages of activity verbs are the highest in the two constructions, while those of achievement verbs are quite low in the both. *Come get* is preferred to use with accomplishment verbs (38.3%) compared with *come & get* (24.5%). While *come get* are rarely used with state verbs (3.2%), there is some frequency of state verbs in *come & get* (13.5%). This thesis finds that the number of usages of activity verbs in *come get* and *come & get* is more prominent than that of *go get* and *go & get*. On the other hand, the number of achievement verbs in *go get* and *go & get* is prominent. It is clear that both *go get* and *come get* are hardly used with state verbs, while there is some frequency in *go & get* and *come & get*.

Table 2-2: Aspects and tokens of V2 verbs in COCA except *get* and *see* in *come get* and *come & get*

| Construction | Total token | Verb types of V2 verbs | | | |

Since the data includes V2 verbs of inflectional forms (e.g. *go shopping*, *come running*, etc.)

and a fixed expression (e.g. *come and go*), I eliminate those inadequate examples manually.

The ten verbs are represented as (21) and (22) show. In each of (21) and (22), verbs which are

used in the both constructions are written in boldfaced type.

(21) *go get* : **get, see, find, buy, take**, check, visit, **make**, sit, pick

go & get : **get, see**, look, say, talk, **take**, try, **buy, find, make**

This thesis examines 590 examples in *go get*, 165 in *go & get*, 136 in *come get*, and 119 in *come & get*. These constructions are examined and categorized into three sentence types: imperative, interrogative, and declarative. Table 3 shows the number of occurrences and percentages of *go get*, *go & get*, *come get*, and *come & get* in American English.

Table 3: The frequencies of sentence types of *go /come get* and *go/come & get* found in COCA

| Construction | Total spoken tokens | Imperative clause | Interrogative clause | Declarative clause |
|-----------------------|---------------------|-------------------|----------------------|--------------------|
| <i>go get</i> | 590 | 125 (21.1%) | 36 (6.1%) | 429 (72.6%) |

| <i>come & get</i> | 107 | 11 (10.2%) | 8 (7.4%) | 88 (82.2%) |

For the convenience of comparison with British English, Table 1 in 2.3.2 is reproduced below as Table 4:

Table 4: The frequencies of sentence types of *go /come get* and *go/come & get* found in BYU-BNC

| Construction | Total spoken tokens | Imperative clauses | Interrogative clauses | Declarative clauses |

(Nicolle, 2009, p. 199)

Table 3 shows that *go get* and *go & get* are most often used in declarative sentences. The percentages of imperative sentences of *go get* are 21.1%, and that of *go & get* is 9.6%. The number of imperative sentences is the second largest in the two constructions in American English. This is also true in British English (see Table 4). The rate of interrogative sentences is low.

Come get and *come & get* is used most often in declarative sentences. The number of occurrences of imperative sentences is the second largest in the two constructions as well as the case of *go get* and *go & get*. The percentages of *come get* in imperative sentences (26.4%) is prominent. The rate of *come get* and *come & get* in interrogative sentences are a little higher than *go get* and *go & get*.

Nicolle (2009) states that total spoken tokens of *come get* are too small to be examined. Therefore, it is hard to compare Table 3 with Table 4. However, the distribution of the three sentence types is similar. All the constructions are used most often in declarative sentences, the second in imperative sentences, the third in interrogative sentences. The prominent difference between Table 3 and Table 4 is the percentages of *go & get* and *come & get* in imperative sentences. While Table 4 shows the percentages are 23.6% in *go & get* and 25.5% in *come & get*, Table 3 shows the percentages are 9.6% and 10.2% respectively.

One of the findings of this thesis is that *go get* and *come get* are preferred in imperative sentences, but *go & get* and *come & get* are not especially so in American English. Since the percentages of *go & get* and *come & get* are more than 80%, these constructions are preferred in declarative sentences.

5.3 RQ3 : How are *go get* and *go & get* used in declarative sentences?

As shown in (13) and (14) in 3.3, declarative sentences are occasionally structured by lexical verbs meaning command, advice, request, wish etc., or modal verbs meaning obligation and necessity. This thesis collects data including the following two patterns:

(i) Lexical verb + O + (to) *go/come-(and)-V*

(e.g. *have/make O do, ask/beg/compel/encourage/expect/get/recommend/tell/want O to do, say/tell (that) imperative form*⁷)

(ii) Modal verb + *go/come-(and)-V* (e.g. *must, have to, had better, should, ought to, need to*)

Table 5 shows modal verbs and lexical verbs preceding *go/come-(and)-V* in COCA.

Table 5: Lexical verbs and modal verbs preceding *go/come-(and)-V* in COCA

| Construction | Total Token (declarative) | (i) Lexical verb (command, advise, request) | (ii) modal verb (obligation, necessity) | total of (i) + (ii) |
|-----------------------|---------------------------|---|---|---------------------|
| <i>go get</i> | 406 | 31 (7.6%) | 56 (13.7%) | 86 (21.4%) |
| <i>go & get</i> | 135 | 4 (2.9%) | 22 (16.2%) | 26 (19.2%) |
| <i>come get</i> | 71 | 13 (18.3%) | 6 (8.4%) | 19 (26.7%) |
| <i>come & get</i> | 79 | 9 (11.3%) | 3 (3.7%) | 11 (13.9%) |

The percentages of *go get* in pattern (i) is 7.6 % while that of *go & get* is 2.9%. There are 11 examples using *tell O to do* (23a), and 10 examples using *say/tell (that) imperative form* (23b) in all the 31 examples of *go get*. There are two examples of *tell O to do* (23c) in all the four examples of *go & get*. The rate of construction (ii) of *go & get* (16.2%) is slightly higher

⁷ There are some examples like, "...he said *go make* me a sandwich and he shoot his dad." (COCA SPOK 2015) Such an example is categorized into declarative sentence but *say/tell (that) imperative form* is clearly used as the expression meaning command. Therefore, this thesis categorizes it into pattern (i).

than that of *go get* (13.7%). *Have to* is used most often in the two constructions as shown in (23d) and (23e).

- (23) a: I told my father to go see it because I was interested in movies. (COCA SPOK 2015)
- b: If you think about it, he said go make me a sandwich and he shoot his dad. (COCA SPOK 2015)
- c: And he...told me to go and get it fixed. (COCA SPOK 2016)
- d: You have to go make a physical cold call into an office. (COCA SPOK 2017)
- e: You have to go and get a real job now. (COCA SPOK 2017)

In *come get* and *come & get*, the rate of pattern (i) and (ii) of *come get* is higher than that of *come & get*. Therefore, the total number of pattern (i) and (ii) of *come get* (26.7%) is much higher than that of *come & get* (13.9%). There is no lexical and modal verb whose frequencies are prominent. (24a-d) show examples of *come get* and *come & get*.

- (24) a: He asked Julia to come meet him at his daughter's soccer game. (COCA SPOK 2017)
- b: And we decided to have her *come and say* hello. (COCA SPOK 2015)
- c: I have to come see you. (COCA SPOK 2016)
- d: ...we just have to come and take a pause and think about what we are doing. (COCA SPOK 2014)

One of the findings of this thesis is that there are differences in the number of patterns (i) and (ii) between *go-(and)-V* and *come-(and)-V*. By comparing *go get* and *go & get* with *come*

get and *come & get*, it is clear that *go get* and *go & get* are preferred with modal verbs in declarative sentences. On the other hand, *come get* and *come & get* are more likely to occur with lexical verbs in American English. When modal verbs, for instance, *have to* are used in declarative sentences like (22c) and (22d), the subject directly commands someone to do something. On the other hand, when lexical verbs like *ask* and *have* are used as shown in (22a) and (22b), the meaning of command becomes milder than that of the modal verb *have to*. Since the number of occurrences of *have to* and *say/tell (that) imperative form* is prominent in *go get* and *go & get*, the two constructions express direct/strong command in declarative sentences compared with *come get* and *come & get*.

6. Conclusion: summary and prospect

This thesis has introduced a corpus-based approach into the research of *go get* and *go & get* constructions mainly, and *come get* and *come & get* as well.

Tentative answers to the research questions are:

(RQ1) What verbs occur in the V2 slot of *go get* and *go & get*, and how often?

Go get construction can take more types of verbs than *go & get* in American English, but *get* and *see* make up the majority among them. On the other hand, there are some frequencies of V2 verbs other than *get* and *see* in *go & get* construction. When the top 20 V2 verbs (except *get* and *see*) are examined, it is clear that the frequency of achievement verbs in *go get* construction is the highest and that of state verbs is the lowest. On the other hand, activity verbs are used most often in *go & get* construction, and there are some frequencies of state verbs. *Get* and *see* are often used as the V2 verbs of *come get* and *come & get* constructions in American English. The percentages of activity verbs in the two constructions are prominent, while both constructions rarely take achievement verbs like *buy*, *make*, etc. This thesis has shown that the usages of *come* + achievement verbs are limited compared with *go* + achievement verbs. The reason for the lower frequency of *come* + achievement verbs is in the following way. People generally can say to someone else "Go buy some fruits" but only shop owners can say "Come buy some fruits". The former sentence can add words indicating places the person buys some fruits (e.g. "Go buy some fruits at the shop/ from him/somewhere"). On the other hand, *come* generally indicates "Come buy some fruits here". Since there is such a limitation, *come* itself is not usually used with achievement verbs.

This thesis has revealed that these four constructions are used differently. Since V1 and V2 are connected with the coordinating & (meaning *and then* or *in order to*) in *go/come & get*, these two constructions can take various types of V2 verbs in a coordinating construction. On the other hand, *go/come get* has a function to empathize the action of V2 verbs. This is why these two constructions rarely take state verbs in the V2 slot. This accords with what Butterfield (2015, p.164) states:

[i]n standard English *come* is often followed by *and* as an introduction to a verb indicating the purpose of coming.... Formerly in standard British English and still in American English and occasionally elsewhere *come* is followed by a bare infinitive...often for rhetorical or dramatic effect.

This statement refers to only *come (&) get*, but it can also be applied to *go (&) get* too.

(RQ2) What sentence types are *go get* and *go & get* used in?

The number of declarative sentences is the largest in all the four constructions. The rate of imperative sentences of *go/come get* is about twice as high as that of *go/come & get* in American English. Compared with Nicolle (2009), it is clear that *go/come & get* constructions are not occasionally used in imperative sentences in American English, but often used in declarative ones.

This thesis has made it clear that *go/come get* is often used in imperative sentences because the two constructions share the function to empathize actions of V2 verbs. The distribution of *go/come get* and *go/come & get* in American English is much clearer than that of British English. One reason why *go/come get* is used in imperative sentences more often than *go/come*

& get seems to depend on length of the sentences. This thesis has shown that *go get* is preferred in short sentences in imperative sentences. In fact, many examples of imperative sentences of *go get* are short. On the other hand, imperative sentences of *go & get* are occasionally a little longer than those of *go get*. Since it is easier to pronounce *go get* without *&*, *go get* is preferred in imperative sentences in American English, while *go & get* is often used in declarative sentences. Example are shown below:

(25) a: *Go get her.* (COCA SPOK 2017)

b: *Go get it for me.* (COCA SPOK 2017)

(26) a: ...when people talk about how destructive this is, just *go and look* to the south.

(COCA SPOK 2017)

b: *Go and look* around what is growing in your area because those are the kind of

plants that are going to do the best in your landscape. (COCA SPOK 2013)

(RQ3) How are *go get* and *go & get* used in declarative sentences?

When these constructions are used in declarative sentences, about 20% of the examples occur with lexical verbs of meaning command, advice, request, wish, etc., or modal verbs of obligation and necessity. *Go get* and *go & get* often occur with modal verbs. On the other hand, *come get* and *come & get* are often used with the lexical verbs. Since most of the examples of the modal verbs are *have to*, and of the lexical verbs are *say/tell (that) imperative form* in *go (&) get*, the two constructions share the meaning of direct/strong command in declarative sentences compared with *come (&) get*.

In order to improve this thesis, two further researches are necessary to be done.

First, the same research should be done with BYU-BNC in order to make more accurate comparison between American English and British English. In addition, since this thesis is synchronic research of *go get* and *go & get* with COCA, it is meaningful to introduce BYU-COHA⁸ (Corpus of Historical American English) in order to do diachronic researches. It will be possible to examine the research questions in this thesis diachronically, and that will make the difference between the two constructions clearer.

Second, it seems meaningful to research other V1 verbs which take *go get* construction. Shopen (1971) states that “many speakers accept not only *go* and *come* as quasi-modals, but *hurry*, *run*, *stay*, *sit*, and *try* as well” (p. 255). Corpus-based studies will make clear what kinds of verbs can be used in the construction and how often. In addition, there is a discussion whether or not *go get* construction takes inflected forms like *went look* as shown in 1. Visser (1969) states that *went look* is used in American English, but Pullum (1990) disagrees with him. By using corpora, it will be possible to examine whether or not *go get* construction can take inflected forms in contemporary English. In fact, there are certain examples of *went look*, *went visit*, *went drink*, etc. in COCA, but these expressions are used only one time each. Therefore, it is true that *went look* is used in American English as Visser (1969) mentions, but the expression is hardly used in empirical situations as Pullum (1990) indicates. Corpus-based studies can contribute to more accurate researches of *go (&) get* constructions.
